

## VAN ESSEN INSTRUMENTS ANNOUNCES FIRMWARE UPDATE FOR THE DIVER-MATE®

**Faster data download, increased efficiency, and the ability to retrieve data from multiple Divers: Meet the updated Diver-Mate.**

February, 2017

**DELFT, The Netherlands** — Van Essen Instruments, the leading groundwater datalogger equipment manufacturer, has released a firmware update of their Diver-Mate field download tool in February 2017 as part of the Diver groundwater monitoring technology.

The Diver-Mate design provides simple and fast data downloads; increasing download efficiency while reducing data transfer errors.

The Diver-Mate can store Diver data from hundreds of Divers with a Diver communication cable. This downloading unit stores data in a non-volatile memory drive, meaning that even if the battery is empty the data will still be available. A full battery can support more than 10 days of operational use and a LED will indicate when the battery voltage is low.

The new firmware update has the following improvements:

- Download data from the TD-Diver (series DI8xx)
- Enhanced battery management boosts battery recharge
